CHANGING THE LANDSCAPE FOR BUILDING & CONSTRUCTION

Nexans offer pre-wired Modular Wiring systems that are the ideal solution for large scale commercial projects with Modular Wiring products. In 2022, Nexans introduced Modular Wiring based from the Apex solution out of the UK. Modular wiring technologies and systems are ideal for commercial constructions, green building and infrastructure projects.

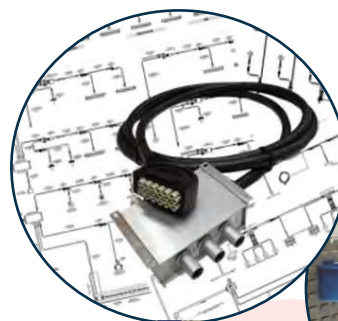

Nexans market-leading modular wiring system was one of the first of its kind to be adopted in Australia and New Zealand with its successful application for large hospitals, healthcare facilities, hotels and other commercial applications.

Because the pre-wired system delivers a simple and repetitive methodology for installation, it significantly increases the speed of completion in large commercial sites that typically have large expanses of lighting and power in recurring layouts and floor plates. It is easy and straight forward to customise for each client and it provides the facility's maintenance team a user friendly and traceable system.

BENEFITS

- Complete electrical installation achieved quickly and safely with a plug and play method.
- Fully pluggable distribution boards, complete small power and lighting solution, incorporating DALI control cables and pre-wired accessories for a turn-key solution.
- Reduced installation time and labour costs.
- Fully tested and quality-controlled production of all cable assemblies and connections means significantly improved efficiency on-site installation due to reduced site snagging.
- Simplicity of the design ensures a minimum number of components and guarantees effective installation and maintenance.
